

# SMS Gateway

## *out of band* text messaging

- 1 The **API** allows messages to be sent to the Notify.com SMS Gateway from **any system, application** or **device**.
- 2 The Notify.com SMS Gateway is a **software application**. Separating the software from the hardware means support for **all carriers**, using **current and future technologies**.
- 3 Supports virtually any **throughput** requirement. The Notify.com SMS Gateway can scale from **1 to 4000** MultiTech SMS modems—all transmitting in parallel.
- 4 Use [MultiTech MultiConnect® Cell 100 Series Cellular Modems](#) (MTC Series) to **transmit and receive** SMS text messages, with direct connections to the **3G** and **4G/LTE** networks. This two-way communication allows users to easily **acknowledge receipt** of important communications.
