Security Advisory 10272026-001

CVE-2026-109618 and CVE-2026-109619

Initial Publication Date: October 28, 2026

Last Updated: October 28, 2026

On October 21, 2026, the PHP project released fixes for two critical vulnerabilities (CVE-2026-109618 and CVE-2026-109619) that could allow remote code execution on servers running affected versions of PHP. This advisory describes how MultiTech products and services are affected and what we have done.

Affected systems and what we did

Radio Bridge Console

Console uses PHP. On October 21, we applied an interim mitigation to both Console environments, disabling a PHP feature identified as a likely attack path. By October 22, both environments had been updated to patched versions of PHP.
Current status: Console is running patched PHP. Our review of the Console server logs to date has found no evidence that these vulnerabilities were exploited.

multitech.net

On October 22, we took multitech.net offline after determining it was running a version of PHP affected by these vulnerabilities. The server has since been updated to a patched version. The update affected some pages on the site, so parts of the site remain unavailable. Contact us if you are looking for a particular document of software build.

PHP has also been removed from git.multitech.net.

Product downloads are available on each product's page at multitech.com. If you need something you can't find, contact us through the support portal and we'll send it directly.

Current status: PHP has been updated. We are continue to review the server for signs of unauthorized access and will update this advisory as needed.

Multi-Tech Systems, Inc.
2205 Woodale Drive • Mounds View, Minnesota 55112 U.S.A.
(763) 785-3500 or (800) 328-9717 • Fax (763) 785-9874
www.multitech.com

Not affected

Engineering has confirmed that PHP is not used in the following:

- mPower, including the mPower GUI and Conduit gateways running mPower
- MTR and MTR3
- mCloud
- DeviceHQ
- LENS

Under review

mLinux-based products: If you created an external facing web page using PHP on your build of mlinux, contact us if you need help in updating your PHP. Engineering is continuing to review the use of PHP on mLinux-based products and will update this advisory as need.

Questions

If you have questions, please contact us through our support portal:
